DR. JOHN GORUP & HAYLEY WOLFE

Understanding lumbar fusion with HA-PEEK.

A guide to your options, the new bioactive HA-PEEK implant material, and questions to bring to your visit.

John Gorup, MD

Board-certified
orthopedic spine surgeon

Talk about your treatment choices and recovery with Dr. Gorup and Hayley Wolfe.

About the procedure

Posterior lumbar interbody fusion (PLIF) joins adjoining spine bones through the back. Disc material is removed. A spacer, bone graft and other implants support the area as the bones heal together.

About the implant material

PxHA combines PEEK, a durable polymer, with hydroxyapatite (HA), a mineral found in bone. HA runs throughout the material. Bone graft and your body's healing are essential to fusion.

THE STUDY RESULTS

Dr. Gorup participated in a seven-year study.

The study tracked patients' results following surgery with a new bioactive spinal implant material, called HA-PEEK.

394 PATIENTS ENROLLED
From 2019–2026

Patients rated pain and daily activities at each visit

Before surgery	6 weeks	3 months	6 months	12 months	24 months

Study results: Dr. Gorup vs the national average

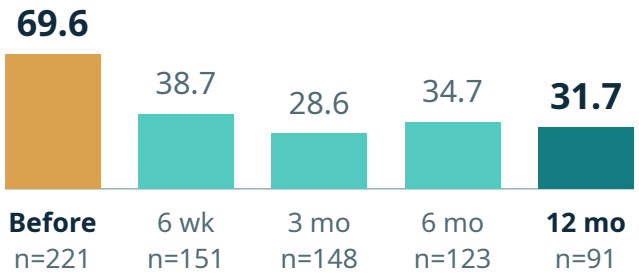

See below for Dr. Gorup's results and how this procedure may help you today.

WHAT DR. GORUP'S PATIENTS HAVE REPORTED

n = number of people answering.

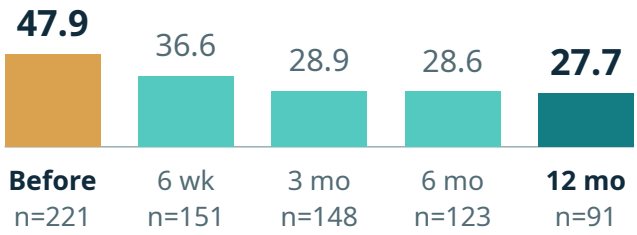

Average back pain

0 = no pain, 100 = worst pain

Average back disability (ODI)

0 = no limits, 100 = most limited

WHAT DR. GORUP'S PATIENTS SAID

Patients' own answers at the 12-month visit.

Satisfied at 12 months

97.8%

Dr. Gorup 91 patients

vs

National average 684 patients — **94.6%**

Would do it again

93.7%

Dr. Gorup 80 patients

vs

National average 509 patients — **89.2%**

No pain medicine

80.2%

Dr. Gorup 81 patients

vs

National average 496 patients — **58.3%**

WHAT THE SCANS SHOWED

X-rays taken as you bend measure how much the treated bones move. Steady means little or no movement, a sign the bones are fusing together.

Steady at 12 months

100%

Dr. Gorup 40 scans

vs

National average 511 scans — **98.0%**

Very steady at 12 months

100%

Dr. Gorup 37 scans

vs

National average 341 scans — **93.3%**

Average movement

0.5°

Dr. Gorup 40 scans

vs

National average 511 scans — **0.9°**
